MICROMARKETMONITOR

Global Solid Oxide Fuel Cells (SOFC) will grow more in forthcoming years

"Solid oxide fuel cells have a potentially long life expectancy (4000-8000hr)."

Solid oxide fuel cells (SOFCs) are best for stationary power. It uses a solid ceramic as the electrolyte and utilizes hydrocarbons and CO as fuel.

These cells operate at a very high temperature, which allows the use of non-precious metal as a catalyst.

SOFCs don't contain any noble metals that could be problematic in resource availability and price issue in high volume manufacture. These cells have extremely low emission of carbon monoxide.

Browse through the market data tables, figures and detailed ToC on the "Global Solid Oxide Fuel Cells (SOFC) Market".

Fuel cells allow more KWH storage than batteries of same weight, that's why it is preferred as a replacement of batteries. There is also rise in investment from Governments and companies towards this industry since last decade.

Solid oxide fuel cells have a potentially long life expectancy (4000-8000hr). It is simple in design and high in stability. SOFCs are flexible in the choice of fuels.

The key players of Solid oxide fuel cells (SOFCs) market are

- Ceres power (U.K.),
- Ceramic fuel cells (Australia)

Further, country wise market share, new product and services launches, M&A, product portfolio of key players is covered in the report.

About MicroMarketMonitor:

MicroMarketMonitor identifies and attends to various unmet needs of different industrial verticals, which include value chain impact analysis. The company publishes about 12000 Market Research Reports on various Micro Markets across the world. The graphical nature and multidimensional analysis of these reports provide advanced Business Intelligence Tools to the clients in that particular target market.
